

SWA has launched a new range of innovative Firefly fire safety clips for Plastic Trunking and other applications

Firefly clips fully meet the requirements of the BS7671:2015 Wiring Regulations to secure all surface cables in escape routes, preventing from becoming entangled, fire-fighters and people escaping burning buildings.

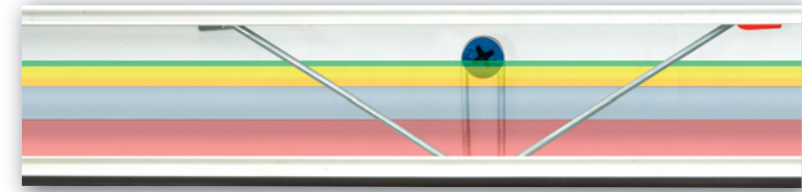

The regulations, which came into effect from July 2015, prohibit non-metallic clips or plastic trunking as the sole means of support.

Firefly clips have been specially developed with a new, flexible design to make them suitable for all popular sizes of plastic trunking. Firefly clips feature

rounded ends, preventing damage to cables and injury to electricians.

What's more, their spring-loaded design makes it straightforward to add or remove cables in the months and years after installation. The full range will include a variety of clips to secure cables both inside and outside trunking and conduits.

With more designs and styles being added each month, SWA's Firefly range is set to be the largest and most comprehensive range of fire safety fixings within our industry.
